

New Approach of Numerical Relativity

Implementation, tests and applications

Alan Tsz-Lok Lam

Supervisor: Prof. Tjonnie G.F. LI

Department of Physics
The Chinese University of Hong Kong

This thesis is submitted for the degree of
Master of Philosophy in Physics

June 2021

I would like to dedicate this thesis to my loving parents . . .

Declaration

I hereby declare that except where specific reference is made to the work of others, the contents of this dissertation are original and have not been submitted in whole or in part for consideration for any other degree or qualification in this, or any other university. This dissertation is my own work and contains nothing which is the outcome of work done in collaboration with others, except as specified in the text and Acknowledgements. This dissertation contains fewer than 65,000 words including appendices, bibliography, footnotes, tables and equations and has fewer than 150 figures.

Abstract

This is where you write your abstract ...

Table of contents

List of figures	xiii
List of tables	xv
1 Introduction	1
1.1 Introduction to General Relativity	1
1.1.1 Einstein Field Equation	1
1.1.2 Relativistic Star	1
1.1.3 Gravitational Wave	1
1.2 Gmunu: A general-relativistic electro-magneto-hydrodynamics code for generic astrophysical simulations	1
1.3 Outline of this thesis	1
1.4 Units and Convention	1
2 Formulations of Einstein Field Equations	3
2.1 Introduction	3
2.2 The 3+1 decomposition of spacetime	3
2.2.1 The ADM formulation	3
2.3 Conformal Decomposition	3
2.4 Gauge Condition	3
2.4.1 Maximal Slicing	3
2.4.2 Generalized Dirac Gauge	3
2.5 Constrained scheme for the Einstein equations	3
2.5.1 The Conformal Flatness Condition	3
2.5.2 The Fully Constrained Formulation	3
3 Formulations of the Relativistic Hydrodynamics	5
3.1 The 3+1 "Valencia" formulation	5
3.2 The reference-metric formulism	5

3.3	Conserved to Primitive variables conversion	5
4	NUmerical Method	7
4.1	Multigrid Method for elliptic equations	7
4.1.1	Overview	7
4.1.2	The Full Approximation Scheme	7
4.1.3	octree-mg	7
4.2	Numerical method for hydrodynamics	7
4.2.1	Finite volume methods	7
4.2.2	Time Discretization	7
4.2.3	Atmosphere Treatment	7
5	Numerical Tests	9
5.1	Multigrid solver tests	9
5.2	General relativistic hydrodynamics in dynamic spacetime	9
	References	11
	Appendix A Useful relations for implementation of constrained scheme	13
A.1	The elliptic equations in constrained scheme	13
A.2	Generalized Dirac gauge conditions	13
	Appendix B Reference flat metric in 3D	15

Chapter 1

Introduction

1.1 Introduction to General Relativity

1.1.1 Einstein Field Equation

1.1.2 Relativistic Star

1.1.3 Gravitational Wave

1.2 Gmunu: A general-relativistic electro-magneto-hydrodynamics code for generic astrophysical simulations

1.3 Outline of this thesis

1.4 Units and Convention

Chapter 2

Formulations of Einstein Field Equations

2.1 Introduction

2.2 The 3+1 decomposition of spacetime

2.2.1 The ADM formulation

2.3 Conformal Decomposition

2.4 Gauge Condition

2.4.1 Maximal Slicing

2.4.2 Generalized Dirac Gauge

2.5 Constrained scheme for the Einstein equations

2.5.1 The Conformal Flatness Condition

2.5.2 The Fully Constrained Formulation

Chapter 3

Formulations of the Relativistic Hydrodynamics

3.1 The 3+1 "Valencia" formulation

3.2 The reference-metric formulism

3.3 Conserved to Primitive variables conversion

Chapter 4

NUmerical Method

4.1 Multigrid Method for elliptic equations

4.1.1 Overview

4.1.2 The Full Approximation Scheme

4.1.3 octree-mg

4.2 Numerical method for hydrodynamics

4.2.1 Finite volume methods

4.2.2 Time Discretization

4.2.3 Atmosphere Treatment

Chapter 5

Numerical Tests

5.1 Multigrid solver tests

5.2 General relativistic hydrodynamics in dynamic space-time

References

Appendix A

Useful relations for implementation of constrained scheme

A.1 The elliptic equations in constrained scheme

A.2 Generalized Dirac gauge conditions

Appendix B

Reference flat metric in 3D
